

## DESCRIPTION

Our CPT truck has been custom built on a diesel powered Isuzu FTS 4x4 chassis. The testing is undertaken within a fully enclosed cabin. The pushing equipment is an A.P. van den Berg Hyson 200 kN, which is hydraulically operated from a PTO off the truck's engine.

The truck is levelled using four hydraulically operated feet. The truck also has a Hiab crane, which can be used to lift our smaller track-mounted rigs into difficult access sites.

## CAPABILITIES

The truck has 12.5 ton push capacity and can undertake the following in situ tests:

- CPT/SCPT
- DMT/SDMT

The depth capacity is 40 m+ (depending on ground conditions).

## WEIGHTS AND DIMENSIONS

Height:	3.6 m (top down) 4.5 m (top up)
Length:	7.5 m
Width:	2.4 m
Weight:	12,500 kg
